The Mining 3

FORMING A COMPLETE RECORD OF THE PROCEEDINGS OF ALL PUBLIC COMPANIES.

No. 441 .-- Vol. XIV.]

LONDON: SATURDAY, FEBRUARY 3, 1844.

PRICE Go.

CWM CELYN AND BLAINA BRON. WORKS, Monmouther ships. TO BE SOLD, BY AUCTION, in Landous, on the 4th day of March and Junions previously disputed of by private meditaria, it that stateship and onewly-granged insentation 1800 M-00 RE, called CWH CELYN AND BLAINA Is Observed the Company of the 1800 M-00 RE, called CWH CELYN AND BLAINA Is Observed the Company of the 1800 M-00 RE, called CWH CELYN AND BLAINA Is Observed the Company of the 1800 M-00 RE, and a powerful PORGE and Miles, respective of the called grades, and severy as transported to another the company of the called grades and severy as transported to another the called grades and severy as transported to the called grades. And severy as the called grades and a powerful PORGE and Miles, respective of the called grades. Company of the the Manisonistic for making 10th tent of cashings for sevels. The produce of these south are not previous for called grades and company to the Milestonia believe to the Company.

As the details of hososes and other prospecty are ton voluminous for an advertise sends, as inventery will be prepared, with every other particular collating to the company, which may be known by applications being made to Mr., Honey Studiest, at the works, or to Mr. Thomass Brown, 21, Browns up a believe of Milestonia of hososys to the Company of the CWHTSTYN VYIL, VATYMITER, BULLUT.

CARDIGANSHIRE—TO BE LET. Ath possession on the 2th day of August, all those colebrated, tick, and printinctives MINES OF EAD CR., and L. WYWA-Y-LLWYNOG WORES, and all other mines on the strange of Wittens Solvard Powerl. Reg., M.P., situate in the county of Carolinan.—The Company th Mines are now worked with great success by the private works and all other mines on the temperature of Wittens Solvard Powerl. Reg., M.P., situate in the county of Carolinan.—The Company th Mines are now worked with great success by the previous senses, and the Company of Solvard Miles are now worked with great success by the previous of allowance to the addition of the senses of the CWHTST WM CELYN AND BLAINA PRON. WORKS, Mont

D CAPITALISTS.—An OPPORTUNTITY offers to ONE or MORE CAPITALISTS by the INVESTMENT, for a short period, of a some recentling ONE THOUGHAND FIVE HUNDRED POUNDS (which may be dilists free absets of draw cach), to realise a bandware assistant recovers to the which because in computed in to work a small color, occident must insepheteromaciances, where no loss can exercity software, as the very material release origina for the other in to constant demands, and would more large cover all exists of working, and the over that mapped be discovered would form the certain which, thus the knowledge of collegation spatities, and the foresity, where a messaginger samply is duly produced, however this part of the question absent of a doubt. In the arrangement propises, if the great profile actionished be called, to substitute become the same selected can possibly in increased.

to full particulars apply to Mr. Alexandre Prince. 13. London a line field.

NTHRACITE COAL.—The interface attached to the APPLICATION of this DESCRIPTION OF TARE. 5 years the absence of the gast the common of beel, has bedown the APPLICATION OF TARE. 5 years the absence of the gast the common of beel, has bedown the ATPLICATION OF TARE. 5 YEAR ALANDES ON SECOND OF TAREST OF COLLIEST ORIGINO—the road being of the first question. Arrange is being on the even of completion for readering this article off for Government once, and more particularly the use in the natw Homeon of Particularies, while a discretific demander may be contemporated in the London markets, upon a DEPOT gESTAR. INSEED, to effect which, a capital beyond that at the common of devertions is required. An experience of its contemporate is the security of the security of the security of the common of the security of the securities of the security of the securities of the securities.

In see settishs on the decisions of tournels, continuous. Acc., inserted to the Mining foormeal of the 25th November last, we entired this invention is summarized with a patent horing markins, to eachie the pipes to be invention that only one with a patent which the pipes, which are wond effectual in their operation, would be uncertainfle, except in new condectakings, where they are hold in with the work. By the sid of this machine, or which the above emproving is a representation, being through the hardest heigh, or seem stone, in a sefe and expeditions operation; portions of the material remeracy in the form of a core, the cutting part of the horse constead an abresion of the brick or stone resent the circumstrance only, and the context memor out is a said pince; a 4 inch tole can be completed through very hard materials at the crist of from fire to also feet per home, three most withing throughout the day; it became in any consisted direction, and the action is somethe and easy. Considerable the improvements have been effected in this machine aimon we lest continued the subject, and the weight has been reflected in this machine since we lest continued the subject, and the weight has been reflected in this machine aimon we lest continued the subject, and the weight has been reflected in this machine since we will be subject to the piperant, and the deferment was only obstacled ofter long and expensive experiments. Well because was only obstacled ofter long and expensive experiments. Well because we made affection of other persons to which it may be applied. With respect to the pipes, in addition to these are made of our true, which are finer foot long, the particular and appropriate their should be as made of earliers, which are finer foot long, the particular and should be a some memory as the pipes—vie, with the arithms of them, professed in the same mechanism to the pipes—vie, and are made affected to the application of deals tills in also about being interesting of the form the description of deals till,

IRON-WORK MADE AT THE OAK FARM IRON-WORKS, NEAR DUBLEY.

nd state of the tree trade, it ment be a gre any to ann extensible serve devating them.celera to make ing designs and se beeting for their adject on extremies to its eduption; and it is with been been at these expects as automotion in the solutions, and it is acta-baseaux we acknowledge the receipt of a relicion containing particulars of one made, dispulsage, and dispulsations of work accordinates by the Chel-lens from Chargeney, including become runs unlike acade particle reacted in flower flexibility per. Eng. countries, particular acade particular data describing the different south of best loves, charte, plates, bring-love, and other trade consentationed, there are discribing of angle and buildings for desire, acting baseling distributions, flower and discribing a acquiring and acquire and had secting baseline, trademon-process, dox, if there consents, analyse and had sected types into a set for plates for their events, made ander a patient with a present attraction to the biling the start according to the distribution for believe the start according to the first section regarded in the bilings in a start occurry a section was prepared in the above is a perioded distributed frosts, affected interest in a construction of the local type printing origin results, and in many accounts a term in one to require the experience of the absence of results, above the properties of the following architectures. As a new confined, and therefore the many there are for a comparing of the following accounts of the following the control of the following accounts the account of the following accounts the account of the following accounts the accounts to the following accounts the accounts to the following accounts the accounts to the account to the acc properties to become actions, which we desired eventually present and a security of the format and the security of the securit

There is also a plan for an entry can only get out of a fixed line just sufficient to term there carries, and one couries acts as a sheek upon the other. A plan for keeping on the sheeks of exercises, in the cerest of sales breaking, consists of two forks attached to the body, which take hold of the chrothereses of the wheek, and, thempt the sale breaks, keep it in its place. A patent ferry is also described; it consists of a boat drawn by an endless claim, passing across the bottom of a river, and round vollers and a harizonal policy, worked by heren or engine-grows. The writer, in his preface, sells effective to the fact, that, in numerous intenses, iron, as a substitute for wood, will be found, in the first instance, chapper, independent of its derability and value when no longer wanted for the purpose. It has been proved that how made from the best rolls and breastone, with cold-blact, and monostartured into har-irow, in eight times as strong as common building plan; the weight is nine times more than wood, but this is not taking into considerations the squal strength in one eighth of its size, while the relative court will, in most cases, turn the scale in favour of iron. Some of the gates made of T iron, firmly railed and welded together, in comparison with a timber gate of the same figure, will not cout in work-manking non-night part. The engravings which like the various new proceases which have here been introduced in the from manufacture shows a degree of ingreenity, combined with perseverance, which does the greatest credit to the suther.

ORIGINAL COMRESPONDENCE.

SAFETY INVENTIONS FOR MINERS.
g a constant conder of your valuable Journal, I have observed
us and plans on the means of preventing accidents to miners
in cases of the rope breaking in descending

in cases of the rope breaking in descending and assending pits, and heg loove to present our a plan of a eagy, with a safety broke.—
Whou the rope breaks, the person descending instinctively grasps say thing presenting itself, and, from the position of the lever, would naturally estantia, and bring the heaks, B, in contact with the spear, C—the friction of which would retard the descent of the mage, and allow the person to descend gradually. There have been instances where the rope has broken when the tub, or eage, has assended test a short distance from the bottom, and the main have not rent level injury from falling. the man have not received injury from falling, but have been according injury from falling, that have been according injured by the rope falling upon them, would it not be better to see here, instead of chains, for suspending the engine, so here would, in a great measure, prevent the rope falling upon the sem.

S. B. Roce (Mr. Ragers's coply to "A Locker-On " shall appear to our sent.)

THE MINING INTEREST—THE METAL TRADE.

THE MINING INTEREST—THE METAL TRADE.

Hin,—It afforded one muck pleasure to persue the letter of "R. W."
last work's Jeneral, inassembly, that the conclusion at which he has arrive
personalities being officially, fully concurs with the views it extertain,
mistock my test letter, in considering it officially towards him—my at
heing certainly to avoid personalities; in oney fature correspondence wie
might arise we now noderstand one another. I shall, in future, when
drawing you, toution myself to the subject, and trust "R. W." will do
asser. Thanking you for your good nature in giving leasertion to my let
which has, I am gind to find, ashiesed the object in view, I remain, Sir,
London, Feb. 1.

London, Feb. 1.

THE SAFETY LAMP—DR. CLANNY AND MR. MURRAY.

Size,—I observe, in the proultimate Number of year valuable Journal, the
in transcribing the title of my paper read before the Royal Society, in 1832
I had uniotentionally omitted inserting, after my name, the letters M.D.

From all which I have read ognized me in your last Number, I will, for the
present, content myself with giving a correct translation of a motto which
wand in a former inter :—"Truth is confirmed by inspection and doing—false
hand profits by heate and outertainty."

Let the gailed inde wiscen, my withers are unwrong, "—duars.

Jan. 29.

W. Beild Clanny.

Jan. 29. W. Bard Clanny.

P.S. From a kind and apparlaneous letter which appeared in the host Number of the Mining Journal, written by my much extended and highly defended for Gineer, I find that Dr. John Murray's paper upon his propose safety lamp was read at a meeting of the Literary and Pollosophisms Society for November at the month of December, and November at the most of the section, and in the discussion beer bestimany of the value of the Doctor's paper, as the living members may remember.

THE SAFETY LAMP-DR. GLOVER. THE SAFETY LAMP—DR. GLOVER.

Sin,—It seems that Dr. Giever has velocitized his acritics in aid of Dr. Chancy, as his prescribed Mr. Drum had done already. I have no thing personally of Dr. John Marray, the one of the late Dr. Marray, the emisent private iretizers on chamistry, in Edinburgh. Dr. Marray, of Edinburgh, I believe, was sever merried. The Dr. J. Mr. ray, to which Dr. Gliver relegs, one suggested noise time ago is giving lectures on chamistry and gasley; in Halling, Vorhaliers, and clarecters. Dr. Giever criticus as personal arguntalesses, and yet calls him Strovend !—I believe be may be found in Edinburgh. I was willing to give this tolorantion to Dr. Giever, though I cannot many rehead wherein I have offended, so as to provide this granditous attach on the part of one who is an utter stranger to me, and of whose very asset I had even believe been utterly unconscious—

the part of one who is an utiler stranger to me, and of whose very name I is even before been utilerly unconsiderat—

"Storer position.

Incorrupts fides, undanges evertes."

While I shall adopt this maxim as my motio, and rule of emobact, I respectively recommend in to Dr. Giover's attention. I have now done with I guestion, as for an arising loops are more record, and any subsequent allies to the subject will hencefurth receive an native from me. Ventilation, and correct motion of working minor, are franched on extentific principles; then for, are now the great desiderate, not suffer lamps—"Find justicities—receive."

J. Monnay.

LIGHT ESSENTIAL TO HEALTH-SAFETY LAMPS. Bux.—I observe one of your encreapendrate is your last Number tells us that light in recessory for the greath and development of man, both in mind and body, and reform as to the squallid figures of people inhubiting or flure, and no colliers. Light is a procedure thing, and it is a priv any one situation for body and reform as to the squallid figures of people inhubiting or flure, and he colliers. Light is a procedure thing, and it is a priv any one situation in the privacy of the procedure of the trace he is to this world, but why do some of your convoyancebed of the flure he is to this world, but why do some of your convoyancebed on of the time he is to this world, but why do some of your convoyancebed on of the time he is to the world, but which complet sever to be used to work by—their was to say it is simple to the makes of the workings, and if the mine is not to a fit state for the naked exactly, it should connote an excellent air to the delicers which continue the most time the naked was acts by these lawny works in almost total declores—yes, deckness which was the privacy of the makes which is a fit to the time to the makes when the fit these lawny works in almost total declores—yes, deckness which from the nightest acciding an august, which may bryone the shoot in drace by one image and of perhaps the or limit; if course, had in the o'valuat of fluors who are during, and consider, with one is just profess a specific of seasofur, visuaghter, Bet, Mr. Einter, and withhelmology one dark at

THE MINING JOURNAL. Mailway and Commercial Gajette.

LONDON, FEBRUARY 3, 1644

Pactice areatenes of contacting the Mining Average, see do an either dissert to a contact a transpire and account on the bookselver in terms or consentry. It found at programming in the realisers are enquented to be the variety or the out-wisers are enquented to be the variety or the out-wisers are expensed to be the variety or the out-wisers.

The meetings of the Cubre and Suntings Mining Companies have The meetings of the Ciders and Santings Mining Companies have taken place this week, reports of the precedings at which will be formed in our columns. At the former, is in the regretted that the directors were not in a position to declare a dividend although, from the statements submitted of the assets, and the quentity of ever on its way to this country, it appeared that some 20,0000, and upwards would be divisible widen two or three mouths. A question of interest, and, inclust, importance, to this company—which, we understoned, has from 7000 to 6000 icon of your area [4 per cost, produce) lying at hack—was brought forward, that of coducing them by the application of a procuse which we naid to be successful in Names. There was evidently a west of knowledge on the part of those who should have been bother informed, and, we regret to any, a tenacity evisced tenaced tenaced their own opinions, without any arguments or facts additioned to oxypers their views. Mr. Tunorarrow's patent for the company, and, from previous to being assetted to any approximation of area previous to be in leng assetted to antertained by the company, and, from the meeting, approximation of area previous to be in the meeting. experiences of overs previous to tering sensitived in amoretained by the company, such from the entpries prevented at the meeting, approximate to be purifice. We aspect, in an early Number, to be in a protince to reader some inaccessing details on the subject, from the patenties. At the someting of the Section, properties, a direction was proposed by the dissepance in the report submitted (, but, as it was represented in the address of the chairman that it was necessary they

the particle of the second control of the se

other influences, would preclude all hope of any chance of a decree in favour of the company at that place, while hopes were entertained on appeal to the Court of Madrid—we have no heeitation in holdly putting forward the case as it stands, as a lesson to capitalists to be cautious with whom they deal. There is a want of hencesty on the part of the authorities—it is notorious; and we recommend parties willing to embark in mining enterprise to look at home—or, at least, in embarking in foreign enterprise, while they satisfy themselves of the probity of those to whom they entrust their capital, that they should not subject themselves to be mulcted by those who derive a profit from their speculations.

The decision of the cause which involved the question of right of

The decision of the cause which involved the question of right of patent in the application of bet-blast has, we find, been terminated (in the action NELLON E. BAIRD), by an arrangement, whereby 100,000£ is to be paid, being at the rate of 15s. per ton, and 6000£ damages—while the other actions pending remain to be decided, which, we have reason to believe, will be by arbitration—5s. per ton having been paid down as an acknowledgment of the right of the patentee, and the residue (whatever may be agreed upon) having to be paid hereafter. to be paid hereafter.

When we consider that Mr. NELLSON has, in other in When we consider that Mr. NELLSON has, in other instances, granted the patent right at is, per ton (at which rate Mr. Chank is using it conjointly with his patent, applying the hot-blast to the use of anthracite), it does seem excessive that such a verdict or decision, by arbitrators or others, should have been arrived at as that of 15s, per ton; but when, on the other hand, it is considered that the parties infringing the patent had in view the evasion of all claim on the part of the patentee, and thus dishonestly pursuing a course which it is now at least clear could not be justified, either in the courts of law or those of equity, the decision that they shall pay fiftee times the amount which would only otherwise have been required is a lesson which we trust will have its due effect in teaching others henceforward to be honest.

Mees times the amount which would only otherwise have been required is a lesson which we trust will have its due effect in teaching others henceforward to be honest.

If that we enter not into detail with reference to a subject of vast interest, that of "Accidents in Mines," it must not for a moment be supposed that the question has either been lost eight of, or that its interest is lessened. We have within the past week addressed upwards of 150 letters to parties (amongst whom are the highest in the realm) who are, or should feel, interested in the subject—and it is with pleasure we add, that the communications received from her Majesty's Ministers, as well as from several Members of Parliament, the Lord Mayor, and some one or fee of the Corporate body, induce us to believe that the exertions made in behalf of the working miner and collier will be effectual. A meeting will be held of the provisional committee within a few days, when the several letters received will be submitted, and active measures adopted.

The proposed additional tax on coal has excited, as very naturally it should do, a considerable interest, not only with the coal propriettors in the north, but with the consumers of the metropolis—and, as we are informed, even the Court of Aldermen have thought fit to entertain the subject as one of sufficient importance to induce them to consider how far the proposed tax of 5d per ton on all coal imported into the metropolis will affect the citizens of London.

We trust that, without a full inquiry, and that embracing the position of the working collier as well as the interests of the consumer, this measure will not be carried out—indeed, we feel assured that the colliery interest in the Houses of Parliament will be sufficient to preclude the passing of a bill. One or two words (and we are indebted to our contemporary, the Gadesseed Observer, for the data) will, we think, be sufficient to establish the injustice of which we complain, of a tax being put on enal imported into the city of London, while as e

It is not our object, on the present occasion, to enter into the question, for want of space turbule it. We have the materiel—and gladly shall we lend our aid to support the colliery proprietor, in thing which we feel that we are promoting the intreest of the working miner and collier.

The such ansers pleasure we find that Cornwall has resulved-for such we hope we may say, with the Earl of Farmout as chairman of a meeting, and Mr. Thirrwy as chairman of the provisional consonitation—to carry out the measure, on makeraken the provisional consonitation—to carry out the measure, on makeraken the measure, whereby "the construction of a railway through Cornwall" may be effected. Although we are in possession of the main points animitated to the meeting, we do not feed that we are warranted at this measured, in the absence of other information, which we expect to acquire on an early day—and knowing, also, the differences which exist in the opinions uncertained by certain engineers—to succe of the subject at length; but, as knowing something of Cornwall and Cornwallers, we do not benefate to sate, that with Lottl Farmout. Sir E. W. W. Pawmanwes, M. P., Sir C. London, and Mr. Tampent (who is not only admitted to be a practical main, but one of the most successfung which the county can proceed) we do enotemplate accounty as large, and more expectably to the mixing districts.

LONDON AND COUNTY JOINT-STOCK BANKING COMPANY. | MIDDLESEX AND SURREY GRAND JUNCTION RAILWAY.

LONDON AND COUNTY JOINT-STOCK BANKING CUMPANT.
The essent extended treet, on Thursday, the last inst., and was numerically attended, proprietors holding half the shares of the company being mont.—The chair was taken by William Hawns, Esq.—Mr. Niconstructured to the company being mont.—The Chairman said it has been the practice, at the least few meetings of his company, to produce the report to be read by giving general information in its various paragraphs. In framing that report, it was necessary to word it in an one-sie language as possible, so that it could but convey all the insumation the discenters wished to be known to the properties. He would not call attention to the general progress of the company since they last had planure of meeting tagether. That progress had hitherto been most ashabin, in the heads of the company, beyond that of any former period, and his without the addition of any new branches to the establishment. They are aware that first the first, accomed, and third years of such a bank, the product were not such as would reimbure them for the large preliminary expenses recessary for its establishment; but, the type-last were not such as would reimbure that they had written of every expense, attending a considerable sum for repairs of premises, before they struck they had mort with such amount of last property was mach greater, and, in agrice of the low rate of interest for less had tready get in the read-principle of the low rate of interest for less its the head establishment. The changes that they had thought occurary analytic get that they had the own and interest for less that they had only looked to the read-principle these changes, they had ingreased balances, both at the branches, as at the head establishment. The changes that they had thought occurary make during the last twelve months, they and ingreased balances, both at the branches, and at the head establishment. The changes that they had thought occurary make during the last works had only looked to the company; and, in frieli

In, he, as well as his collection,—Mr. Nictions then treat they had reposed by them without the least hewitation,—Mr. Nictions then read the directive report and accounts to the meeting, for which, together with the remistions placed, see advertisement in another column.

The Charlaman said he aboud he who happy to neasure the questions of any proper stee, but previous to that he would here to move "that the report he received, adopted, and printed for the use of the shareholders."—Mr. Inaacc there entered into a longithrouse statement, which he road to the meeting, in which he impact here with the would here they had reported the submertised capital. During his speech be quoted a clause of the deed, by which he maintained it was the duty of the directors to the purpose of desardving the company.—Mr. Communicated it the sate speaker was a risud of Mr. Blact. (Ricar, hear.)—Mr. Inaacc and he knew anothing of Mr. Start, and gave what he understood to be the two violatement of their position from his own inquicies.—The Cantaman remarked, that he could see most distinctly that they had not best own third of their capital, our applies of their capital? Start on the sate of the directors are supplied by their own anothing; and he had not required of their capital? Start on the board of their capital, and only propagated, like many others, to taject their establishment. (Applants.)—Mr. Inaacc without it knew whether the woment of their capital? Start on the sate of their capital? Start on the sate of their capital? The character of their capital? All the new what then was the came of their had not propagated, like many others, to taject their establishment. (Applants.)—Mr. Inaacc without it have we then prove the plants of their capital? Start on the sate of the capital start of the capital

was actual if the private brokers and not participated in Mr. Stront's pumphints I--The Channuay: Cortainly, and that this art apply to the county of Kanna. The marine

closite, and parend unanimeracy, proposed a vast of thanks to the directors for their resumed by Mr. Knintusa (ni D ver), and passed a mylonest.—The CRAIMAN retorned thanks in his set coale for the certifier of the chieffore for the committed by Mr. Jancova, and agreed to meanly water, and Mr. Drickin, were then stretch as. Mr. J. C. Jopes, Mr. S. Jevis, and Mr. W. connectments.—The Co. atman a time progression

the whole of the north wast, much, and south eastern lines, reducing from the metropolis, and thus securing a rapid means of communication between the ports in the west and norta-west parts of the kingdom, and bover, Brighton, Portsmenth, and Southampton, and eventually with Dovon and Cora wall, contracting the whole southern line of contra-direiting in the Givernment a safe and speedy means of transport for frange, and military and menal stores, and the conveyance of the saids between the west and motherwest, and the conveyance of the saids between the west and motherwest, and the conveyance of the saids between the west and motherwest, and the contract of the kingdom, both for home and foreign delivery, avoiding London, and the necessity of sorting, and will offer a saving of time of some boars. This line will nice being the Royal palaces of Heighton. Hampton Court, and Windone, within direct collect collect of view, there is little doubt this line powerses many important features, and is likely, besides the general facilities which a railway always secures to the linealities through which it passes, to open new markets for agreement of the Middond other produces, in districts hillerthen almost excluded for want of easy and charaptrandit. It will secure the direct supply of the counties of Survey, Kent, Sussex, and Hampshire, from the large monthelating turns of the Middond Counties, Yorkshire, der. The samply of hops, cattle, and sheep, together with the produce of the early fruit a name in the south, will receive an immense impulse from the construction of this line, and server-the method monther than and relumding in the metropolis. The line, with all these advantages, and taking in, as it does, so important a circuit, will be but thirty miles in length, commencing ones the Harron Station, on the Brighton and Dover line, and taking in, as it does, so important a circuit, will be but thirty miles in length, commencing again the Harron Station, on the Brighton and Dover line, and its miles in the constructio
